Table 5 - Manual for Streets width calcualtions from fig. 7.1	

1.0 Introduction

- 1.1 This Design Statement has been prepared in accordance with instructions from Farnsfield Parish Council (FPC) to accompany and support the design of a proposed access road as part of the full concept design of the East Side Project in the village of Farnsfield, Nottinghamshire.
- 1.2 The East Side Project revolves around FPC's visions to enhance the recreation greenspace in the areas known as Hadleigh Park, Reynold's Field and The Acres. As part of the wider brief, Inspire Design and Development were commissioned to prepare a concept design for enhanced recreation facilities as well as the viability of a new driveway to serve the proposed facilities in Reynold's Field and The Acres.
- 1.3

This statement discusses the thought process in selecting the optimum route for a proposed driveway and pedestrain footpath as part of the East Side Project. Design characteristics of the proposed driveway and safety considerations will also be outlined. The Statement will conclude by recommending to the Council the most viable route option to be considered as part of the wider masterplanned site.

2.0 Route Options

- 2.1 The 'Preliminary Basis for Design' document prepared by Inspire Design on 22nd January 2021 originally outlined three routes, Options 1, 2 and 3, which had been considered as part of the optimum route selection process. A fourth option, known as option 2(b) has now been added. All four options will be appraised in the section to better understand their appropriateness for developing as part of the wider masterplan.
- 2.2 When considering the appropriate route, Inspire reflected on the wider context of the surrounding area, including:
 - The existing bridleway of Cotton Mill Lane and the associated dwellings.
 - Parfitt Drive and the associated dwellings and side roads.
 - The existing car park and its access which serves Hadleigh Park.
 - The Parfitt Drive estate attenuation basin located at the south western corner of Hadleigh Park.
- 2.3 Following careful consideration, four options were considered for potential routes. Appendix A of this Statement conveys these routes visually and should be read in conjunction with the below.

Option 1 – Cotton Mill Lane

2.4 This option would look to use the existing bridleway of Cotton Mill Lane from its junction with Quaker Lane to The Acres.

Table 1 - SWOT Analysis of Option 1	

Strengths	Weaknesses	
Continued use of the pre-existing route to The Acres.	 Route is an unadopted bridleway with unknown ownership status. Cotton Mill Lane is not wide enough to permit passing on-coming vehicles. 	
Opportunities	Threats	
	 Inadequate visibility is detrimental to highway safety. 	

Council East Side Project

state. • Impacts to residents on Cotton Mill Lane	Would allow resurfacing of Cotton Mill Lane which is currently in a degraded state.		
---------------------------------------------------------	-------------------------------------------------------------------------------------------	--	--

2.5 At present, the lane is surfaced with hardcore material and, in its current condition, would require to be replaced with a hard surfacing such as tarmacadam. Both Cotton Mill Lane and Quaker Lane are narrow, and have inadequate visibility conditions. Quaker Lane is also used for on-street parking by local residents, presenting additional visibility hazards. Increase use of this route as part of the East Side Project may lead to objections from the Local Highways Authority due to the impact to highway safety..

2.6

Inspire do not recommend this route be explored on grounds of highway safety.

Option 2(a) – Parfitt Drive Attenuation Basin

2.7

This option would take access from Parfitt Drive, approximately 30 metres south of Carding Close. The drive would then follow around the outside of the attenuation basin and connect into Reynold's Field.

2.8 The table below summarises the characteristics of this option.

Table 2 - SWOT	Analysis of Option 2(a)
----------------	-------------------------

Strengths	Weaknesses
 The route would remove the least amount of greenfield. Removes the need to take access from Cotton Mill Lane. 	 The route would create a division between the attenuation basin and Hadleigh Park. The route also passes TPO trees. A new access would be required off Parfitt Drive. Acts as a barrier through the usable park space.
Opportunities	Threats
Utilise existing route infrastructure on Parfitt Drive.	 Unknown legal and engineering constraints which could result in increase and additional design costs.

• Foundation work for the drive may impact roots of TPO trees. This would require investigation.
 A new access is likely to increase vehicular movements on Parfitt Drive.

- 2.9 Table 2 summarises the Option 2(a) route. The route would have little greenfield loss. However, it would require further investigation in regards to the trees which are protected under TPO legislation. These can be found in Appendix B of this report. While Appendix B highlights the location of the TPOs, it is not a definitive plan and therefore additional arboricultural surveys would need to be commissioned to ensure any foundation design does not impact the roots of those protected trees.
- 2.10 The route of Option 2(a) would also create a barrier between the attenuation basin and Hadleigh Park. It is understood that members of the local community value the attenuation basin as an additional amenity within the park. We would therefore consider this option as an obstruction to the use of the attenuation basin as part of the wider park amenity.
- 2.11 Other additional considerations for this route include the requirement to create a new access off Parfitt Drive. This would require additional engineering and legal considerations, including the technical approval for such access under Section 184 of the Highways Act 1980.
- 2.12 Inspire therefore do not recommend this route option due to the additional costs associated with the engineering design, additional investigation work and legal considerations which would be involved in constructing this option.

Option 2(b) – Parfitt Drive Attenuation Basin

- 2.13 This option would take access from Parfitt Drive, approximately 30 metres south of Carding Close. The road would then cut through the existing attenuation basin, before connecting into Reynold's Field.
- 2.14 The table below summarises the characteristics of this option.

Table 3 - SWOT Analysis of Option 2(b)

Strengths	Weaknesses
 The route would remove the least amount of greenfield. Removes the need to take access from Cotton Mill Lane. 	 The route cuts through the attenuation basin, which would require relocation. The route also passes TPO trees. A new access would be required off Parfitt Drive. Acts as a barrier through the usable park space.
Opportunities	Threats
Utilise existing route infrastructure on Parfitt Drive.	 Unkown legal and engineering constraints which would result in increase and additional design costs. Relocation of the attenuation basin would require detailed design of a
	new basin, possible realignment of Severn Trent sewer pipes, including associated technical approvals.
	 A new access would increase vehicular movements on Parfitt Drive.

- 2.15 Table 3 summarises the Option 2(b) route. While the route would reduce the amount of greenfield loss, it would require the relocation of the existing attenuation basin. The Basin is part of the Parfitt Drive estate. Its purpose is to store the surface water runoff from the estate.
- 2.16 The relocation of this basin would require significant engineering and legal input with regards to the design, adoption and technical approval of a new basin. Liasing with Severn Trent Water would be required in order to arrange for re-alignment of the sewer pipes, and the overall technical approval for the redesigned basin. These elements would likely require additional fees being paid to Severn Trent Water.
- 2.17 It is of note that the trees on the south western boundary of Hadleigh Park are covered by a Tree Preservation Order. Details of this can be found in Appendix B. Prior to any

design work, an arboricultural survey would need to commissioned to ensure that any road foundation design did not disturb the roots of the TPO trees.

- 2.18 The route would require a new access to be designed off Parfitt Drive. The access would require technical approval under Section 184 of the Highways Act 1980 from Nottinghamshire County Council Highways. This element of the route would attract additional costs in both engineering design and legal considerations. It is possible that the increased vehicular movements may require the installation of traffic calming measures along Parfitt Drive.
- 2.19 In respect of the above, Inspire do not recommend this route for consideration on the grounds of underlying costs likely to outweigh the overall benefits of the new access road.

Option 3 – Hadleigh Park Drive

2.20 Option 3 would take access from eastern boundary of the existing Hadleigh Park car park. The route will then follow the eastern boundary of Hadleigh Park before connecting into Reynold's Field.

St	rengths	We	eaknesses
•	Minimal impact on residents of Parfitt Drive and Cotton Mill Lane.	•	Longer length than options 2(a) and 2(b)
•	Route runs along the boundary of the park, therefore minimal impact on park users.		
Op	oportunities	Th	reats
•	Creates a logical walking route from one end of the site to the other.	•	Loss of green space.
•	Use of landscaping to create visual features and enhance the park's amenities.		

2.21 Table 3 summarises the Option 3 route. The route is longer, however it is unlikely to incur the additional costs and engineering and legal constraints as options 2(a) and

2(b). The route would create a logical walking route, with the opportunity for landscaping elements to screen the route from existing park area.

- 2.22 Option 3 has a minimal impact on the residents of Parfitt Drive, eliminating the need for a new access to be constructed and any requirements for traffic calming to be installed on the existing Parfitt Drive. By taking access from the existing car park access, there is no additional costs required for the design and technical approval of a new access.
- 2.23 Inspire therefore recommend the Option 3 route. Option 3 is likely to provide the most benefits; with minial impact on existing residents, and reduce the need for costly engineering designs. A plan of Option 3 has been included in Appendix C of this statement.

3.0 Design Principles

3.1 When considering the engineering design of the proposed access, the Department for Transport's 'Manual for Streets' was consulted for technical guidance. Table 4 highlights the technical guidelines for the design of the access route.

Table 5 - Manual for Streets width calcualtions from fig. 7.1

Minimum Single lane carriageway width	2.8m
Minimum footway width	2m
Total minimum width of driveway	4.8m

- 3.2 Separation of the footway from the carriageway by a signle continuous white line will allow opposing vehciles to pass by crossing the white line, therefore no passing places will be needed. Signage would indicate to drivers and dootway users that vehicles may cross the white line to pass oncoming vehicles when it is safe to do so. A knee rail fenc may be needed on the east side to prevent passing cars from running on the grass and the swale drainage on that side.
- 3.3 Pedestrian, cycle and wheelchair symbols on the footway will make it clear that this aea is not for driving on unless passing on-coming vehicles.
- 3.4 Bitumen macaddam (Tarmac) road surfacing is recommended as being
 - Relatively low cost
 - Low maintenance
 - Simple to drain
 - Aesthetically pleasing

Owing to the narrow width, edgeing blocks would be needed for shoulder support. This will prevent the loss of structural integrity of the drive's surface and provide clear demarcation of the route.

3.5 A generious offset of 5m from existing trees and hedgerows has been recomments to allow for future growth and prevent adverse impact to their roots.

4.0 Safety Considerations

- 4.1 Adequate forward visibility has been provided in the design of the drive. In addition, knee rail fencing with occasional gaps will be located along the west side to prevent park users from running onto the drive.
- 4.2 Traffice calming measres will control vehicle speeds. The Nottinghamshire County Council's Traffic Calming Design Guide recommends round-top road humps. The road humps will be set at a maximum of 50m spacing.
- 4.3 A lifting barrier gateway will be located at the end of the drive where it takes access from the Hadleigh Park car park. The barried system will be used to restrict access to users of the Reynold's Field facilities and prevent the misuse of the drive and secondary car park.

5.0 Drainage

- 5.1 The drive will have a crossfall of 1 in 40 towards the east side where a filter drain/swale will be located about 1m from the edge.
- 5.2 The surfacing of the drive will be flush with the grassed surface on eitherside without any high kerbs or other barriers so as to allow surface water to drain into the swale.
- 5.3 The filter drain will fall towards the south where it will connect to similar frainage from the Reynold's Field allotments.

6.0 Conclusions and Recommendations

- 6.1 This Design Statement identifies the appropriate route option for the proposed access drive as part of the wider Farnsfield East Side Project.
- 6.2 The statement sets out the design requirements and other technical considerations which have influenced the design of the proposed driveway.
- 6.3 The statement recommends to FPC the selection of the option 3 'Hadleigh Park Drive' as being the most cost-effective and benefical route for the proposed driveway. Option 3 utilises the exsiting access from Parfitt Drive and has minimal impact on residents of the Parfitt Drive estate and users of Hadleigh Park.
- 6.4 Inspire have prepared a general arrangement plan to support option 3 route. This can be found in appendix C.
