- Decision:
Proposal: G1 - Eucalyptus Group that has been pollarded previously. This group features several lapsed pollards and coppices which are now beginning to fail and pose a significant risk to the surrounding highways. Carry out a selective thin of all stems within the group and coppice selected stems to a height of 20cm above ground level to allow for natural regeneration. The ratio of trees being coppiced to pollarded is as follows: 70:30 % The trees to be retained will be pollarded to approximately 5m (the height of the previous cut points) and
