

Current situation:

Recorded rainfall

In Spring and Summer 2025, less than average rain was recorded. Autumn 2025 was wetter than average, with particularly wet periods during the first half of September and the second half of October 2025. December 2025 was wetter than average. In January 2026, around a month's rainfall has been recorded in the first 3 weeks.

# Groundwater status summary

With only small amounts of rain through spring and summer, groundwater levels fell and remained low through autumn. Following December's persistent rain, groundwater rose, but stabilised during the cold end of the year. January's rain caused groundwater to rise again. At most monitoring boreholes in Hampshire, groundwater is now at an average level for the time of year. In a few locations, including at Preston Candover and Meonstoke, groundwater levels are slightly above average for the time of year.

## Current groundwater flood impacts

Groundwater flood impacts are not thought to be occurring.

## Weather forecast

### Days 1 to 5

Periods of rain are forecast on each of the next five days, to 28 January 2026. There remains uncertainty in locations and amounts, but it could be possible for some locations in Hampshire to receive the equivalent of another half a month's rainfall over the coming week.

### Days 6 to 10 to 14 to 30

More unsettled weather is predicted during the last week of January 2026, but there is uncertainty in geographic location. The unsettled weather might predominantly affect the west of England. Longer term weather forecasting is very difficult, but the current suggestion is that February could start with colder weather, although with milder and wetter weather possible again from the middle of February 2026.

## Forecast groundwater response and risk of flooding

If persistent and widespread rainfall occurs this week, groundwater levels are expected to continue rising throughout January and into February. If this occurs, then it is possible that minor groundwater flooding impacts could be observed in a few communities in East Hampshire such as Hambledon, Finchdean and Meonstoke. Flooding impacts could include winterbourne streams flowing, water appearing in fields, gardens and roads, as well as water affecting cellars of isolated properties.

In all other communities in Hampshire, groundwater flooding impacts are less likely and would require heavy and persistent rain for much of February as well to occur.

In most years, most boreholes experience groundwater rise until March.

It is very difficult to accurately predict the weather weeks or months ahead, and the forecast might change. The exact groundwater response will depend on the amount, intensity and distribution of any rainfall that occurs.

If only a small amount of rain occurs at the end of January, and a period of cold weather occurs in February, then groundwater flood impacts are much less likely to occur during this winter season.

Summary of possible groundwater flood impacts

Name	District	September 2025	October 2025	November 2025	December 2025	January 2026	February 2026	March 2026	April 2026	May 2026	June 2026	July 2026	August 2026
Groundwater flooding in Bishops Sutton	Winchester						Possible if v wet	Possible	Possible

## Current situation:

A Flood Alert [is not currently in force](#).  
Groundwater levels, at the borehole in **Long Sutton** are:  
[Below average for the time of year but currently rising](#).

## Current impacts:

[Not aware of flood impacts currently occurring in the community](#).

## Prediction:

Based on the weather that has happened and is forecast,  
groundwater at **Long Sutton** [will likely initially rise until early March 2026](#).

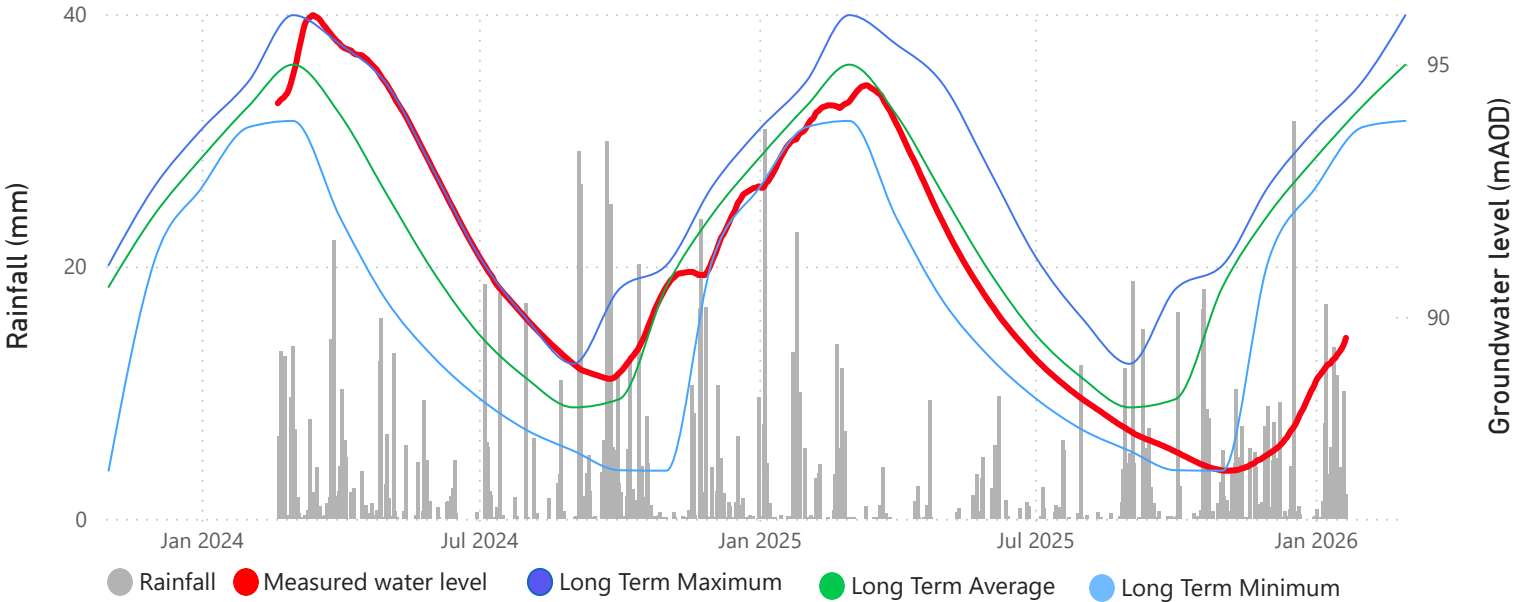

The groundwater might not continuously rise, there could be periods of rise and fall.

Long term predictions are difficult, however on average periods of groundwater rise  
occurs between [October and March](#).

[Groundwater flood impacts are not currently expected](#).

These estimates could change, particularly if rainfall significantly differs from average.

[Groundwater flood impacts could be possible from mid February 2026 and may last until mid March 2026. If exceptional rain occurs, groundwater flood impacts could be possible from early February 2026.](#)

These estimates could change, particularly if rainfall significantly differs from average.

[Groundwater flood impacts possible in the community could include:](#)

[If persistent rainfall occurs through the remainder of January 2026, minor flood impacts affecting fields, roads, gardens, and a small number of cellars could be possible.](#)

### Groundwater levels at Chalton

### Groundwater levels at Finchdean

## Rockbourne, Damerham, and Martin

### Current situation:

A Flood Alert [is currently in force](#).

Groundwater levels, at the borehole in **Woodyates** are:

[Average for the time of year and currently rising](#).

More information: [↗](#)

### Current impacts:

[Not aware of flood impacts currently occurring in the community](#).

### Prediction:

Based on the weather that has happened and is forecast, groundwater at **Woodyates** [will likely initially rise until early February 2026](#).

The groundwater might not continuously rise, there could be periods of rise and fall.

Long term predictions are difficult, however on average periods of groundwater rise occurs between [October and February](#).

[Groundwater flood impacts are not currently expected. If exceptional rain occurs, groundwater flood impacts could be possible from early January 2026.](#)

## What we are doing

We will continue to monitor groundwater levels and their response to rainfall. We will be using our technical knowledge and experience alongside our flooding procedures to assess the risk of groundwater flooding.

We will update this Briefing Note when there is a risk of groundwater flood impacts, to provide the latest situation and forecast. We will issue Flood Alerts when flooding affecting properties is possible. When in force, groundwater Flood Alerts are updated with information more frequently.

## Flood Alert service coverage

We offer a Groundwater Flood Alert service for the following areas:

- |  |                                   |
|--|-----------------------------------|
| • Basingstoke and Buckskin                                       | • Bishop's Sutton                 |
| • Sherbourne St John   | • The Candovers and Old Alresford |
| • Alton  | • Bramdean and Cheriton           |
| • Crondall   | • Hensting and Twyford            |
| • Deane and Ashe in North Hampshire                              | • Hursley                         |
| • Vernham Dean and Bourne Valley                                 | • Meon Valley                     |
| • Villages surrounding Andover                                   | • Hambledon                       |
| • King's Somborne and Little Somborne                            | • Finchdean and Rowlands Castle   |
| • Pitton, West Tytherley, Broughton and Nether Wallop            | • Denmead                         |
| • Sutton Scotney and Chilbolton                                  | • Damerham and Martin             |
| • Littleton, King's, Headbourne, Martyr Worthy, Chilland, Easton | • Rockbourne                      |
|  | • Shipton Bellinger               |

If you would like to receive our messages, please ensure you are registered to receive the information most relevant to you and that your contact details are up to date. If you wish to register or amend your registration then call Floodline on 0345 988 1188 (24 hour service) or go online at <https://www.gov.uk/get-flood-warnings>

If you are able, and would like to help, please do inform us how groundwater is affecting you. We would like to be able to use your experience to improve our service. Email [richard.eastaff@environment-agency.gov.uk](mailto:richard.eastaff@environment-agency.gov.uk) or use the contact details below.

## Actions and advice

Think and prepare now for what you'll do if flooding occurs where you live, don't wait until flooding happens. Prepare a flood plan to help you and your community decide what practical actions to take before and during a flood, which will help reduce the damage flooding could cause.

We have a [leaflet](#) offering practical advice to help you reduce the impact of flooding from groundwater. An accessible version is available on Gov.uk <https://www.gov.uk/guidance/groundwater-flooding>

Keep an eye on the latest rainfall and groundwater levels on our website.  
We recommend opening this site in Google Chrome - some Microsoft internet browsers restrict access to Google Sites.  
<https://sites.google.com/view/groundwatergraphs>

Some computers are preventing hyperlinks from taking you directly to our site.  
Our site is secure, has a valid security certificate, and we do not ask for or take any information.

If our site does not open...  
- You can type the address into your internet browser. Preferably Google Chrome, or Safari for Apple.  
- Or you can click on the link above, and then click on the 'Groundwater Graphs - Google Sites; Groundwater levels in Hampshire and Sussex' page.  
- Alternatively, search for 'Groundwater Graphs' on the internet. It is normally the first result.

If for any reason you are restricted from accessing our site, typing out the address into Google Chrome or Safari (on Apple devices), or searching for 'Groundwater Graphs' on the internet (again in Google Chrome) should open the page.

## Next update

This groundwater briefing note will be updated by 18:00 on Friday 13 February 2026.

## Further information

The latest Flood Alert information can be found on the GOV.UK website at:

<https://check-for-flooding.service.gov.uk/>

You can view daily groundwater levels compared to average and maximum and indicative impact thresholds on our website here:

<https://sites.google.com/view/groundwatergraphs>

Please note that data displayed is raw and not quality assured.

You can view sub daily groundwater levels on the Gaugemap website at:

[www.Gaugemap.co.uk](http://www.Gaugemap.co.uk)

Please note that data displayed on Gaugemap is raw and not quality assured.

We also publish a water situation report which can be found on the Gov.UK website at:

<https://www.gov.uk/government/collections/water-situation-reports-for-england>

We publish a shorter version of this groundwater briefing note on Gov.UK:

<https://www.gov.uk/government/publications/sussex-groundwater-situation>
