

Did you know our foundations are 400mm deep?

Installation

Play Equipment Instructions

All eibe equipment comes with it's own unique set of installation instructions these not only guide the installers to make sure the equipment is installed exactly as it was to get it's TUV certificate but also to number and label every part of the unit for easy effective installation. This means ordering spare parts is a quick and effective even if the product is modified over time. The installation instructions always remain unique to you.

Summary:

- A full set of installation instructions will be provided for this project.
- Includes full installation procedure
- All parts have unique code identifier
- Various foundation and fixing methods provided
- Scope of delivery
- Maintenance guide
- Details on warranty and parts guarantees
- Guidance on wood protection
- Elevation and plan views
- Proof of maintenance sheet

The Team:

We aim to use our own installation teams for all our groundwork's playground installations, this means we can keep tight control over standards and quality issues. Regular training is provided from changes to the HSE to important updated from the British Standards. It is key for us to provide and up to date installation method leaving a clean bill of health from the independent inspection.

Independent inspection:

All our playgrounds get inspected by a member of the RPII, this is the register of inspectors international, very much like RoSPA which is available on request as an alternative play inspection body.

Guarantees of Spare Parts

Terms of Guarantee

Please note that the Guarantee period will commence following completion and contract sign-off. For guarantees to remain in effect for their duration the Customer has a responsibility to adopt a suitable maintenance regime for all aspects of the play environment (please see eibe’s recommended maintenance below). All inspection and maintenance undertaken by the Customer, or by others on the Customer’s behalf must be recorded, detailed and documented. Maintenance records will be requested when a claim against eibe’s guarantees are made.

Where inspection and maintenance records cannot be produced then eibe will not be responsible for honouring the guarantees offered. On the basis that recorded inspection and maintenance documentation can be produced then eibe will uphold the guarantees offered. Misuse of any aspects of equipment or the play environment, acts of vandalism/anti-social behaviour, or general wear and tear through frequent use is not covered by the guarantees.

Availability of Spare Parts

Spare parts are made available for the life of all eibe equipment, whether the requirement is to replace a single element or an entire unit.

With respect to the lead times associated with spare parts, these are as follows:

24/48hrs – For standard screws and fixings etc.

1 Week – For elements such as swing seats, connection elements, ropes etc.

3 Weeks – For structural posts, slides etc.

Other:

| Time | Guarantee Cover |
|--------|--|
| 1 Year | Covering all workmanship elements including concrete foundations, and hard and soft landscaping i.e. planting, mounding etc. |

Aftercare and Maintenance

Maintenance

eibe playground equipment is designed and manufactured with a minimum maintenance requirement. Inevitably with any play equipment, maintenance activities will be required and shall be undertaken to ensure equipment longevity and to maintain compliance with the relevant standards.

The following regime is recommended for all eibe play equipment:

Quarterly Checks

We recommend that a thorough check of all play equipment and entire play areas are conducted on a quarterly basis. Checks should include the above and, in addition, should include checks to ensure that all fixings are tight using the correct tools and correcting where not. In addition, undertaking a more thorough check to identify any wear to any moving parts, ropes, or fixings, and where appropriate taking remedial action.

Annual Checks

We recommend that an annual inspection is carried out, which would include the above recommendations. In addition, eibe advises that a qualified Independent Inspector carry out an inspection and produce a report of the play area and equipment to ensure that all elements remain sound, and in line with the appropriate standards. Where potential issues are highlighted then remedial action shall be taken.

Please note that the above information is based upon eibe’s experience and recommendation only. Each play area and item of play equipment is different; therefore the Customer should instigate an appropriate maintenance plan, taking into consideration this guidance to ensure that all play areas and play equipment remain available for use.

Based on experience, equipment is likely to require more regular maintenance during the first three months following its installation. This is on the basis that the equipment is adapting and acclimatising to its environment, and in addition during this period the amount of usage is likely to peak. Therefore, maintenance teams should plan for this and react accordingly.

Durability

Whilst all types of equipment, features and elements within a public open space are potentially at risk from damage and wear from excessive use, eibe ensures that through careful design, quality manufacturing and extensive experience in developing public play environments, our product characteristics are:

All materials used are of the highest quality, and designed specifically for heavy and potential inappropriate use.

All appropriately treated where possible to be fire retardant

All include anti-tamper fixings

All equipment is modular allowing individual components to be replaced separately

All fixings and areas for maintenance are assessable and can be reached without the need to remove sections of equipment

Support

eibe supplies all relevant installation and maintenance instructions for each piece of equipment . This references the information provided above and in addition, provides specific requirements for the item of equipment. Combining the installation and maintenance instructions ensures that individual parts can be clearly identified and provides an understanding of how the equipment is assembled which will assist with any maintenance requirements.

Where required, eibe supply specialist tools in order to carry out the required equipment maintenance – examples of this include specific drill/screw pieces in order to tighten anti-tamper fixings.

Should the Customer wish to receive installation/maintenance instructions for each piece of equipment suggested as part of this tender response, these are readily available.

Aftercare

eibe can provide aftercare services; not just parts supply, but inspection and assistance with future maintenance.

In addition to the recommendations on maintenance and the supply of documentation needed to conduct and carry this out, eibe will appoint a dedicated Play Consultant in order to assist with any questions, queries, or issues which the Customer may have following contract award and project completion.

Your Play Consultant will be your main point of contact for any contract related queries. This will provide you with a single point of contact rather than numerous, ensuring clear and consistent lines of communication for all contract queries, which may include meetings, site visits, phone and email communication.

The Play Consultant will be supported by our Project Manager and Project Administration team to ensure continuity of service and after care during the contract delivery stage and beyond.
