

The Invasive Black **ASIAN**

HORNET

geness+++**HERE+NOW**+Seen+at+**Ashford**+++Seen+at+**Dungeness**+++**HERE+NOW**+Seen+at+**Ashford**

as big as our Native Hornet (about an inch long), but it is **BLACK** with an **ORANGE STRIPE** across the tail

Has spread across all France in just 15 years and now it is arriving here

in **Summer and Autumn** look out for huge nests usually high in a treetop but **sometimes dangerously** in a hedge a house roof or in an attic

Our Native Hornet is **YELLOW** and not a problem

Get the App

Asian Hornet Watch

it is the easy way to **ID the Asian Hornet and to report it with photo proof - which is essential -**

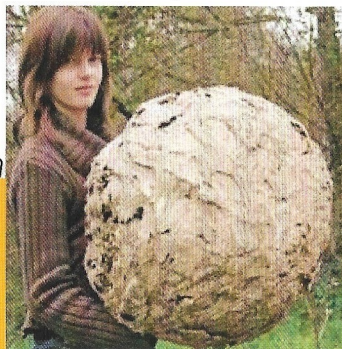

then free Government teams can be mobilised to locate and destroy the nest near you

Individual insects can be safely photographed - but keep your distance from nests as they are very aggressively defended

Asian Hornet preys on already scarce pollinators by the million

but also look for it feeding on flower nectar - notably **Ivy in Autumn** and **Camellia in Spring** or on ripe or rotten fruit

it also scavenges on dead animals and fish scraps

in **Spring** check porches, sheds, garages barns and other shelters for a "wasps nest" but with **big black - not yellow -** insects

Spot it — Snap it — Send it

for more info email — hornet@canterburybeekeepers.org.uk or asianhornet@kbka.org.uk
