

NETHER WALLOP TREE SURVEY
17 August 2021

Village Green (Mouland's Meadow)										
SITE:			SURVEYOR:				DATE:			
			EM Souter				17 August 2021			
Tree No.	Species	Height (m)	Trunk Diam (cm) @ 1.5m	Crown Radius (m)	Vigour Low or Normal ?	Age	Surrounding Features	Condition Good Fair Poor Dangerous	Recommmendations / Priority	
									Action Yes/No	
									NGR, Priority & Notes	
VG1	Weeping Willow Salix Babylonica	20	57	5.6	N	2005 (16 yrs)	Grass with bare earth under Crown radius	Good	Yes	<p style="text-align: center;"><u>NGR SU 29994 36550 Priority 3</u></p> <p>The tree is a public area that is used by people and children enjoying the Village Green. Concern has been expressed about the possibility of branches breaking off. On closer inspection I believe this is unlikely in the near future but advice should be sought from a qualified arboricologist and, if necessary and advised, the tree should be pruned/pollarded back to reduce leverage on the main branches. The tree has one weak fork structure (see photos) but this is unlikely to cause problem but needs to be monitored. Otherwise there appears to be nodisease or fungal colonisation. Annual monitoring should be done due to the high footfall using the green</p>
VG2	Weeping Willow Salix Babylonica	20	57	5.5	N	2005 (16 yrs)	Grass with bare earth under Crown radius	Good	Yes	<p style="text-align: center;"><u>NGR SU 29981 36575 Priority 3</u></p> <p>The tree is a public area that is used by people and children enjoying the Village Green. Concern has been expressed about the possibility of branches breaking off. On closer inspection I believe this is unlikely in the near future but advice should be sought from a qualified arboricologist and, if necessary and advised, the tree should be pruned/pollarded back to reduce leverage on the main branches. There appears to be no structural issues, disease or fungal colonisation. Annual monitoring should be done due to the high footfall using the green</p>
