

Rainwater Harvesting

-Outline of systems

and costs

Why Sunergy Group?

Trust - Uncompromised Quality - Tested Contemporary Technology - Right First Time

Rainwater Harvesting

- Typical domestic uses are:
- Garden irrigation
- Toilet flushing
- Car washing
- Laundry

How Much Water Can I Collect?

- When you start to think about rainwater harvesting it's important to know what kind of rainfall you can expect and what you may be able to collect.
- The average annual rainfall for each region can be found at <u>Current Results</u> and this is a good starting point for finding out.
- Then you need to do the following in order to determine how much water you can collect:
- Calculate the 'flat area' of the roof, which is usually the same as the footprint of the house below
- Then multiply the rainfall by the roof area
- Finally deduct 20% for evaporation and overflow will give us the figure we need

So as an example:

• A house with a roof area of 100m2, near Basingstoke, which has a rainfall of 660mm per year, the calculation will be 100m2 x 660mm x 0.8, which equates to **52,800 litres of potentially collectable rainwater each year**.

Typical Project Timeline

Village Hall, Hampshire

	Name	Assigned to	Start	Finish	% Complete Jul 2	Jul 9	Jul 16	Jul 23	Jul 30	Aug 6	Aug 13
1	Survey		7/10/2023	7/10/2023	0						
2	Design		7/11/2023	7/12/2023	0						
3	Price and Proposal		7/14/2023	7/14/2023	0						
4	Procurement		7/17/2023	7/28/2023	0						
5	Civils		7/31/2023	7/31/2023	0						
6	Installation of tank, pumps, filters and pipework		8/1/2023	8/2/2023	0						
7	Commissioning		8/3/2023	8/3/2023	0						
8	Handover and documentation		8/4/2023	8/4/2023	0						

Maintenance Of Rainwater Systems

- •Gutters and downpipes: Inspecting for leaks and blockages and a build-up of debris.
- •Filter: Checking and cleaning the filter, if required at least once a year.
- •Storage tank: Looking for leaks and a build-up of debris, and ensure the tank is stable and the cover is properly fitted.
- •Pumps and pump control: Checking for leaks and corrosion, whilst also looking at the gas charge.
- •Back-up water supply: Ensure the main water back-up supply is OK, and that there are no leaks.
- •Control unit: Making sure the unit is operating as expected and the alarm function is working correctly.
- •Water level gauge: Gauge indication checks are working in tandem with the tank water level.
- •Wiring: A visual check that wiring is electrically safe.
- •Pipework: Check for leaks, that pipes are watertight, and overflows are clear.
- •Markings: Ensure warning notices and pipework identification is correct and present.
- •Support and fixings: Any adjusting and tightening where needed.
- •UV lamps: Cleaning and replacement if required.

Summary

- Capex Cost between £2,500 and £6,000 for residential dependent on roof m2 and localised rainfall
- Use for clothes washing, flushing, hand washing, irrigation and car washing
- Simple civils installation
- Commercial schemes available
- Newbuild housing schemes available
